

To ensure correct use, please read these instructions carefully.

- All luminaires must be installed by a qualified electrician.
- Installation and replacement of damaged luminaires, cleaning and other service works must be carried out by a qualified personnel with power disconnected.
- Make sure the wires or cables are connected to the corresponding connector terminals. For luminaires with emergency power module, use an additional connector between the battery and the converter.
- Any work related to LED Modules must be done in electrostatic gloves. None of their use may result in loss of warranty.

**WARNING:**

The selection of the right assembly elements (e.g. mounting dowels) suitable for the mounting surface belongs to the installer.

For safety reasons, it is necessary to read these instructions before starting the assembly. The instructions should be kept for future purposes. The fitting being the subject of these instructions must be used according to its original purpose. Fittings can be installed only by persons who are trained and duly authorized to do so.

1. The Producer has the exclusive right to introduce modifications to the product.
2. The Producer shall not be held liable for the following:
  - damages which occur after the product has been modified by a user,
  - damages to the product resulting from installation not carried out in compliance with the instruction for assembly, installation by unauthorized persons or damages resulting from unsuitable storage,
  - the product getting dirty during assembly if the person carrying out the assembly does not wear disposable gloves.
3. While mounting luminaires stiffness and carrying capacity provided by ceiling manufacturers have to be taken into consideration. (uniformly distributed load and concentrated force load)

**WARNING:**

Ceiling-type fittings must not be covered with an insulating mat

**Maintenance**

During the exploitation period of lighting it is necessary to inspect the fittings in order to detect malfunctions and mechanical damages, as well as impurities, in particular those of elements in the optical system.

1. Before proceeding to the inspection of a fitting, the power supply must be turned off.
2. Elements of the fitting which get used up or damaged in the course of standard exploitation must immediately be replaced with new and defect-free elements.
3. The fitting and its elements (glass, painted surface) can be cleansed with biodegradable liquids using soft washcloth and after removing impurities they need to be dried (with a dryer or wiped with a dry washcloth). OPAL and MPR surfaces, rasters, reflectors should be blown over with compressed air. Lighting fixtures used to illuminate the premises and the surface.
4. Any work related to LED Modules must be done in electrostatic gloves. None of their use may result in loss of warranty.

The fittings do not pose any threats to the safety of humans or property, provided that they are properly installed, maintained and used in compliance with their original purpose.

**The use of lighting fittings produced by Millia Light.**

Lighting fittings produced by Millia Light are aimed for use in standard conditions, with the exception of special-purpose fittings. Standard conditions are featured by ambient temperature of  $+5^{\circ}\text{C} \div +35^{\circ}\text{C}$  pressure of 960-1020 hPa, and humidity of 10 - 75%. Such conditions prevail on the European territory.

The fittings should not be used, if the environmental conditions could harm the structure of a fitting, top coats or electronic component parts placed inside the fitting, causing malfunction of the fitting. The luminaires are tested and comply with the EN-60598-1 standard.

The risks factors include i.e. high temperature, excessive humidity, dustiness, the presence of chemically significant substances in the atmosphere (chlorine, salt, acids, alkali), vibrations, shock, UV radiation, electromagnetic fields. The fittings must be used according to their original purpose. They must be installed according to the installation instructions, solely by persons authorized to do so.

**Notice:**

In luminaires with a OPAL or MPR diffuser, the diffusers are cut 1mm/1m shorter than the length of the profile due to thermal expansion of the diffuser. In OPAL, MPR, Asym, Louvre luminaires it is not allowed to install the luminaire with the shutter by pressing the shutter!

**Source of light**

The light source used in this luminaire should be replaced only by the manufacturer or his service representative or a similarly qualified person.

LED version

	X	A
2xLED 650/1100	380	580
3xLED 650/1100	660	860
4xLED 650/1100	940	1140
5xLED 650/1100	1220	1420
6xLED 650/1100	1500	1700
7xLED 650/1100	1780	1980
8xLED 650/1100	2060	2260
non-standard version	real measure	

4

5

Mount the brackets

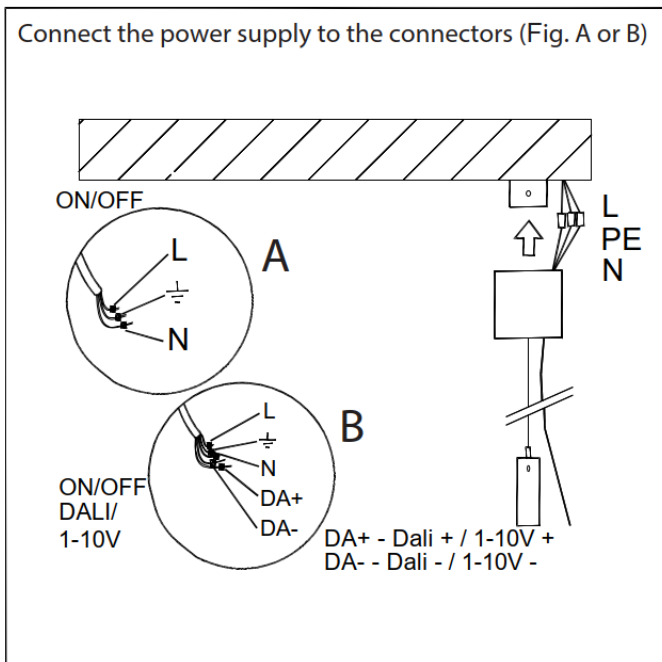

6

Hang the fixture body on the wires

7

Connect the power supply to the connectors (Fig. A or B)

8

Pull the cover up to the ceiling. Turn the cover, locking the cover in place

9

Standard product -> see point 16

Non-standard products -> see points 10 -

Line or angle mounting: Mount the next fixture according to the instructions above and proceed to point 10

10

Put on electrostatic gloves, unscrew and remove the LED module from the fixture, secure until reassembly

11

In case of lines: install electrical and mechanical line connector

View from the bottom

B

C

12

In case of angled mounting lines: install line connectors - electrical and mechanical

View from the bottom

B

C

13

Put on electrostatic gloves, connect the LED power supply (I), place the LED modules in the luminaire body (II), screw the LED module to the luminaire body (III)

14

In case of luminaires with LED > 5 pcs, screw another LED module to the luminaire body and connect with a quick connector

15

Install the diffusers in the fixture

16

Clean the luminaire. Turn on the power supply
